

The College of Technology and the Michigan Transfer Agreement

The Michigan Transfer Agreement 30 credit block does not fit well into the Bachelor of Science degrees in the College of Technology and because of this, Davenport University recommends that students do not complete the MTA if they plan on pursuing a degree in the College of Technology. Students are encouraged to discuss the MTA requirements with their community college academic advisor, their Davenport University admissions representative and academic advisor as they complete their associate degree at their local community college.

There are 34-44 credit hours of general education course work in the Bachelor of Science degree programs in the College of Technology. Davenport University will accept in total the 30 credit hour block that comprises the MTA and apply it to the general education requirements in these programs. The course work taken at the community college to meet MTA requirements will determine the remaining credit hours of general education course work transfer students will need to take at Davenport University.

Please contact the Director of Transfer Articulation at 616-742-1718 for assistance in determining which courses you will need to take at Davenport University, if you have any questions and/or need additional information.
